

Summary

As a developer and entrepreneur, I am fully motivated to create and develop products and features. My goal is to deliver a high level of product to the end customer. I always looking to sharpen my coding experience and learn useful tools and technologies.

Work Experience

Application Developer at Quality Forward a start-up providing e-QMS solutions, 2019 - 2021

- Developing both the client and server side of the system, mostly in JavaScript
- Work closely with customers to implement their business and technical requirements, including scripted business rules, automations, events handling, REST based integrations, etc.

Mobile Apps Development Freelance, 2020 - present

End-to-end development of mobile apps, including app design, client and server-side implementation and deployment.

Projects

- **BabyBit** – A simple mobile app for managing your babysitter shifts and payments. Built by React-Native in the front, node.js and MongoDB in the backend.  
- **BeatFit** – A mobile app for tracking your personal trainings and nutrition programs. Developed by React-Native, node.js and mongo. 
- **Schedj** – A mobile app for scheduling meetings and managing projects between students. Developed by React-Native and Firebase. State management with Redux, push-notifications, multiple users calendar synchronization. 
- **Smartest** – A web platform for exam checking, 2019 BGU Hackathon winner initiative. Developed by React.js and node.js.

Professional Knowledge

- Programing Languages - **JavaScript, Python, Java**
- Web & Mobile Development - **React-Native, ReactJS, Node.js, HTML, CSS**
- Data Bases – **No SQL (MongoDB, Firebase), SQL (SQL-Server, MySQL)**
- Version Control - **Git**
